### What's New in the?

Choose from multiple car models to format your USB drive, and easily format it to match your car's audio system Format your USB drive to ensure perfect compatibility with your car stereo system Simple to use software Formatting is easy with this multi-platform app that supports multiple USB drives San Francisco city officials on Tuesday ordered Verizon to block customers from using apps that block access to the internet, following a request from the city attorney's office. The action comes as a result of a lawsuit brought against the company by Supervisor Aaron Peskin, who made the request after learning of an app called "SafeSipper" that blocked some Verizon customers from accessing the internet. The city attorney's office said that the lawsuit, which was filed Monday, is based on the idea that Verizon could make these apps more available to Verizon customers, but the app blocks access to the internet. "We recognize that there are legitimate interests on the part of customers to have some control over their Internet service," said City Attorney Dennis Herrera. "However, Verizon is the only local telephone company that is providing the U.S. Supreme Court's ruling regarding net neutrality, that says internet service providers should not block or interfere with web content and that is our guiding principle." Herrera's office said that the mayor's office does not have the legal authority to force Verizon to block customers from using an app, but that if the company does not comply with the order, San Francisco can ask the Public Utilities Commission to take action. Verizon said in a statement on Tuesday that it "deeply appreciates the thoughtful approach and transparency of the SF City Attorney's Office. We look forward to continuing to provide customers in San Francisco with internet access." "We have long had a working relationship with the City Attorney's Office and look forward to continuing to work together on issues of this importance to our community," Verizon continued in the statement. The company said that it is working with the "SafeSipper" app's developer to make sure that it "communicates clearly about how the Internet works and how it benefits consumers." The company added that the app "will continue to be available to customers who want to use it as an alternative to a traditional modem." The app's developer, VTS Labs, said in a statement on Tuesday that it worked with the Federal Communications Commission to support a net neutrality proposal in October, which passed and is now law. "We have not received any direct communication from the City Attorney's office to cease distribution of the app, and are in no way being told to stop distribution," the company said. "We are working to make sure that all of our customers are able to access the internet." Peskin in a statement said that the SF city attorney's office has an obligation to uphold net neutrality, which is "one of
