This is my first summary/podcast of 2019, and, of course, I'm talking about JavaScript. In this episode, we take a look at three tools that help you debug code. The first is the node CLI debugger that, unfortunately, is not available in browsers. We'll take a look at two JavaScript tracing tools. The first one is the more conventional traceur. The second one is a new one that came out recently. It's called the plugin called, "Go". Let's see if it does what it promises to do. And finally, the last tool is a new debugger called the chrome debugger. The first tool I'm going to cover is the node debugger. If you're a beginner, or a web developer, the node debugger will not be your favorite tool. However, if you're not a beginner and you've written a lot of code in JavaScript, or any other language, the node debugger is, without a doubt, your savior. And so, we're going to go to the node debugger. The first thing you need to do is install node. Once node has been installed,
